Question 16 – 25

Read the following information and answer the questions that follows.

The firefly population that is one of Malaysia's top tourist attractions faces destruction because of the large-scale land clearing. The riverside firefly colony lies about 90 minutes' drive from Kuala Lumpur.

Tour operators say the number of the insects has fallen sharply because of development in the area.

Despite the region being declared a firefly sanctuary, almost 95 acres of land along the Selangor river had been cleared of the trees in which fireflies live. This is the place where they get their food and lay their eggs to sustain their three-month cycle.

Felling of trees in the area, which is destined to become palm oil plantations, had also polluted the river.

The black-and-white Malay tapir can grow to 363 kilograms. It inhabits the forest and swamps of Malaysia. Scientists believe that these animals have changed a little over tens of millions of years.

Tapirs have a short trunk, which is really an extended nose and upper lip. They use this trunk to grab branches and clean them of leaves or to help pluck tasty fruits. Tapirs feed each morning and evening. During these hours, they follow tunnel-like paths to reach waterholes and lush feeding ground.

The tapir is endangered due to hunting and habitat loss. Only about one-fifth of the original forest remains. Most of the forests have been cleared for agriculture. Expansion of urban areas also threatens some of the last remnants of coastal forests.

The leatherback turtle is virtually extinct in Malaysia as habitats vanish. The population is also waning due to legal and illegal egg harvesting and turtle hunting.

According to the report, Malaysia leatherback rookeries have declined from approximation 5000 nests per year in 1960s down to less than 10 nests per year so far this decade.

Leatherback turtles are hunted for their ornamental shells while their eggs are considered delicacies. Illegal gathering of eggs to be sold in the markets also contributes to the decline in the number of these turtles. Moreover, crowds of tourists who came to watch the turtle lay eggs created so much noise and drove the turtles away. They also made campfires which scared them away.

Questions 16-20. Based on the information given, answer the questions that follow.

Category	Endangered 16.
	Vulnerable 17.
	Near threatened 18.
Major threats to these animals are:	19.
	20.
