**JANGAN BUKA MODUL INI SEHINGGA DIBERITAHU**

**Arahan kepada murid**

1. Tulis nama dan tingkatan anda pada ruang yang telah disediakan.
2. Kertas soalan ini adalah dalam dwibahasa.
3. Soalan dalam Bahasa Melayu mendahului soalan yang sepadan dalam Bahasa Inggeris.
4. Jawab semua soalan dalam Bahagian A dan Bahagian C.
5. Pilih satu soalan sahaja dalam Bahagian B.
6. Sila gunakan pen untuk menulis jawapan.

Untuk Kegunaan Pemeriksa			
Bahagian	Soalan	Markah Penuh	Markah Diperoleh
A	1	5	
	2	5	
	3	6	
	4	7	
	5	8

C	11	20	
JUMLAH			(2)

**Modul ini mengandungi 43 halaman bercetak termasuk muka hadapan**

**Bahagian A / Section A**

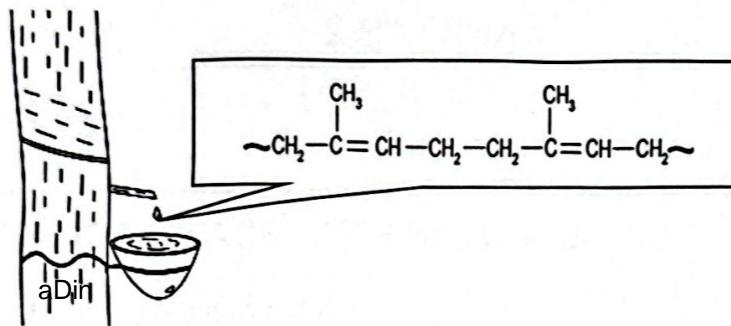

[60 markah / 60 marks]

Jawab semua soalan

Answer all questions

1. Rajah 1.1 menunjukkan formula struktur bagi polimer semula jadi yang terdapat dalam lateks daripada pokok getah.

*Diagram 1.1 shows structural formula of natural polymer that is present in latex from rubber tree.*

Rajah 1.1 / Diagram 1.1

- (a) Apakah yang dimaksudkan dengan polimer?

*What is meant by polymer?*

..... [1 markah/ mark]

- (b) Polimer boleh dikelaskan kepada polimer termoplastik, termoset dan elastomer berdasarkan ciri-cirinya. Nyatakan kelas bagi jenis polimer dalam Rajah 1.1.

*Polymer can be classified to thermoplastic, thermoset and elastomer polymers based on characteristics. State the class of type of polymer in Diagram 1.1.*

..... [1 markah/ mark]

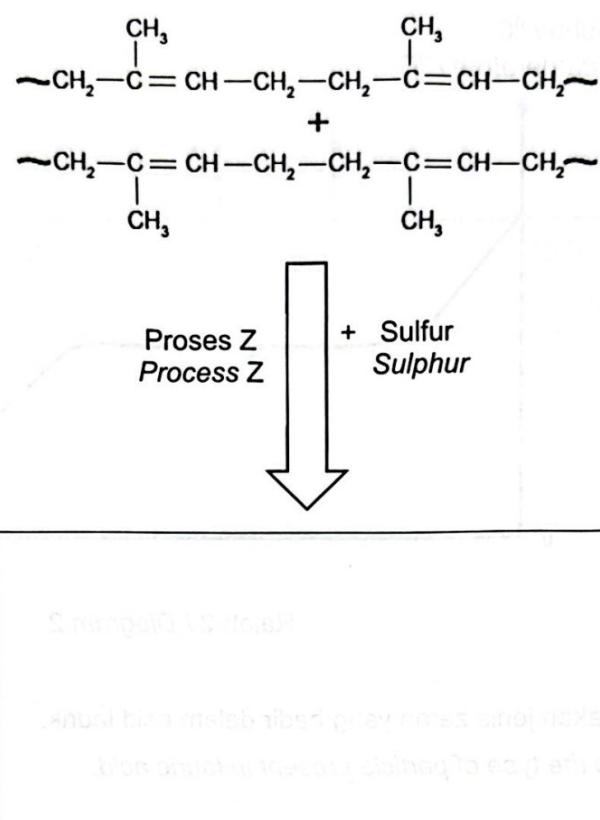

- (c) Nyatakan nama bahan yang boleh ditambah untuk mengekalkan lateks dalam keadaan cecair.

*State the name of substance that can be added to maintain latex in liquid state.*

..... [1 markah/ mark]

- (d) Polimer dalam Rajah 1.1 menjalani proses Z untuk menambah baik sifat-sifat asalnya seperti dalam Rajah 1.2.

*Polymer in Diagram 1.1 undergoes process Z to improve the original properties as shown in Diagram 1.2.*

[Peta Jawapan 1]

Rajah 1.2 / Diagram 1.2

Nyatakan nama bagi proses Z dan lukiskan struktur polimer yang terbentuk dalam ruang yang disediakan.

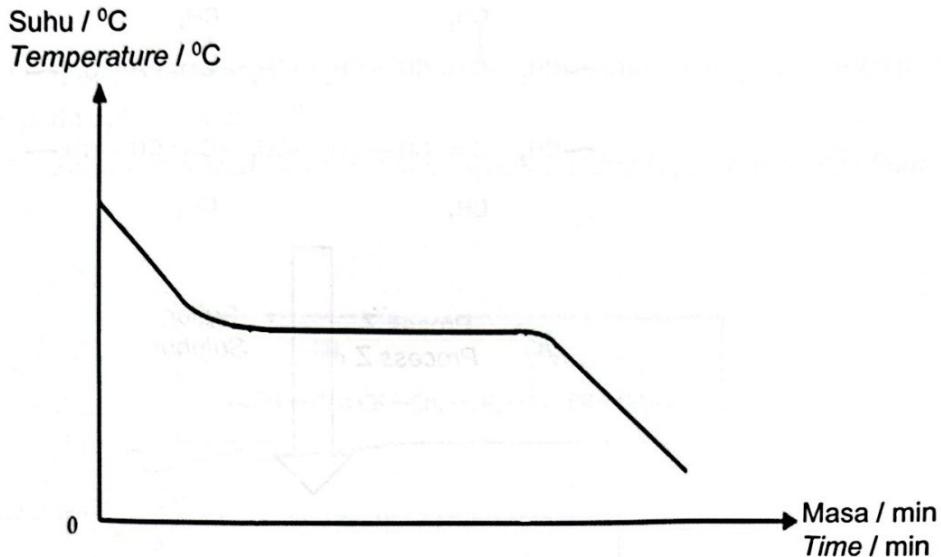

*State the name for process Z and draw the polymer structure formed in the space provided.*

[2 markah/ marks]

[Peta Jawapan 2]

2. Rajah 2 menunjukkan graf lengkung penyejukan dari suhu  $50.0\text{ }^{\circ}\text{C}$  ke suhu bilik bagi asid laurik,  $\text{C}_{12}\text{H}_{24}\text{O}_2$ . Takat beku asid laurik ialah  $43.8\text{ }^{\circ}\text{C}$ .

*Diagram 2 shows the cooling curve graph from  $50.0\text{ }^{\circ}\text{C}$  to room temperature for lauric acid,  $\text{C}_{12}\text{H}_{24}\text{O}_2$ . The freezing point of lauric acid is  $43.8\text{ }^{\circ}\text{C}$ .*

Rajah 2 / Diagram 2

- (a) Nyatakan jenis zarah yang hadir dalam asid laurik.

*State the type of particle present in lauric acid.*

[1 markah/ mark]

- (b) Namakan proses perubahan keadaan jirim yang terlibat untuk mendapatkan lengkung dalam Rajah 2.

*Name the process in conversion state of matter involved in obtaining the curve in Diagram 2.*

[1 markah/ mark]

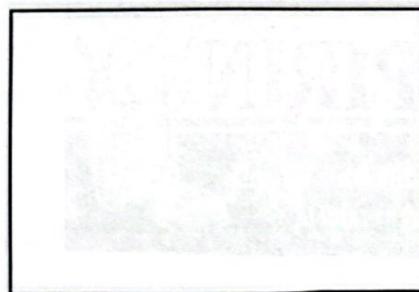

- (c) Tandakan takat beku bagi asid laurik pada Rajah 2.

*Mark the freezing point of lauric acid in Diagram 2.*

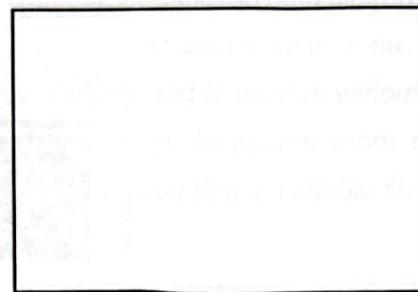

[1 markah/ mark]

(d) Lukis susunan zarah asid laurik pada  $30^{\circ}\text{C}$  dan  $45^{\circ}\text{C}$ .

Draw the particles arrangement of lauric acid at  $30^{\circ}\text{C}$  and  $45^{\circ}\text{C}$ .

$30^{\circ}\text{C}$

$45^{\circ}\text{C}$

[2 markah/ marks]

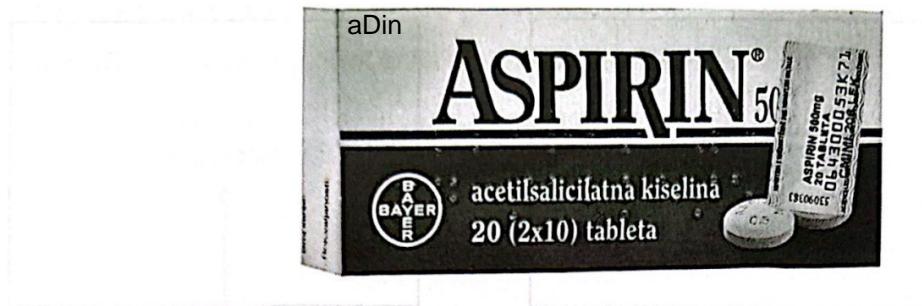

Ahli sains boleh menggambar susunan zarah asid laurik di dalam dua kotak yang diberikan berdasarkan maklumat yang diberikan.

[Hand drawing]

Lauric acid consists of saturated fatty acids with 12 carbons. It has a melting point of  $44^{\circ}\text{C}$ . At  $30^{\circ}\text{C}$ , the particles are in a liquid state, which means they are moving around freely. At  $45^{\circ}\text{C}$ , the particles move faster and have more energy, causing them to spread out more.

[Chemical structure]

3. (a) Rajah 3 menunjukkan ubat yang diberi kepada pesakit untuk melegakan kesakitan.  
*Diagram 3 shows medicine given to a patient to relief pain.*

Rajah 3 / Diagram 3

Berdasarkan Rajah 3,

*Based on Diagram 3,*

- (i) Nyatakan jenis ubat tersebut.

*State the type of the medicine.*

..... [1 markah/ mark]

- (ii) Nyatakan satu kesan sampingan jika aspirin diberikan kepada kanak-kanak.

*State one side effect if aspirin is given to a child.*

..... [1 markah/ mark]

- (b) Seorang pesakit mengalami gejala gatal-gatal, bengkak dan artritis. Cadangkan jenis ubat yang sesuai untuk merawat gejala-gejala tersebut.

*A patient is experiencing symptoms of itching, swelling and arthritis. Suggest the suitable type of medicine to treat these symptoms.*

..... [1 markah/ mark]

- (c) Bidang nanoteknologi telah berkembang dengan sangat meluas dan digunakan dalam pelbagai bidang. Penurasan air tidak ketinggalan menggunakan teknologi ini bagi memastikan penurasan lebih efisien dapat dijalankan. Cadangkan satu allotrop karbon yang sesuai digunakan sebagai penurasan bahan. Terangkan jawapan anda.

*The field of nanotechnology has developed very widely and is used in various fields. Water filtration is no exception to using this technology to ensure more efficient filtration can be carried out. Suggest an allotrope of carbon that is suitable for use as a filtering material. Explain your answer.*

[Percubaan]

4. n Rajah 4 menunjukkan petikan daripada sebuah artikel.

Diagram 4 shows a quote from an article.

### Teknologi Kereta Api Laju STAR 21

STAR 21 ialah kereta api laju pertama di Jepun yang menggunakan motor elektrik jenis frekuensi boleh ubah. Badan kereta api ini dibuat daripada aluminium berkembar menggunakan bahagian berongga panjang yang dikimpal bersama. Pemasangannya menggunakan paku rivet duralumin, iaitu teknik yang dipelajari daripada pembinaan kapal terbang.

### STAR 21 High-Speed Train Technology

STAR 21 is the first high-speed train in Japan to use an electric motor with variable frequency. The body of the train is made from double-layered aluminum using long hollow sections welded together. Its assembly utilizes duralumin rivets, a technique learned from aircraft construction.

[Dipetik dan diubahsuai daripada / Quoted and adapted from:

<https://rollingstockworld.com/passenger-cars/history-evolution-of-experimental-high-speed-trains-in-japan/>

Rajah 4 / Diagram 4

- (a) Apakah unsur lain yang terdapat dalam paku rivet selain daripada aluminium?

*What other element is found in rivets besides aluminium?*

[1 markah/ mark]

- (b) (i) Terangkan mengapa duralumin lebih kuat berbanding dari aluminium.

*Explain why duralumin is stronger than aluminium.*

[2 markah/ marks]

- (ii) Duralumin mengandungi 93% aluminium. Hitung berat aluminium dalam kg jika berat satu gerabak ialah 35 tan.

[1 tan=1000 kg]

*Duralumin contains 93% aluminium. Calculate the weight of aluminium in kg if the weight of one wagon is 35 tons.*

[1 tonne = 1000 kg]

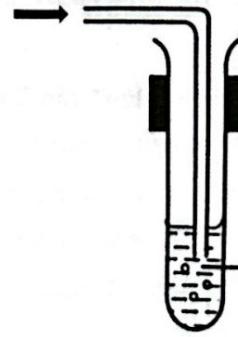

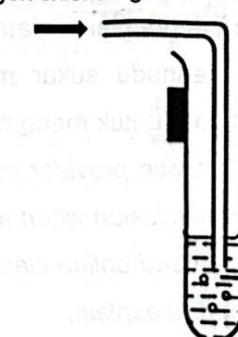

[2 markah/ marks]

- (c) Sebuah syarikat pembekal internet di kawasan luar bandar menghadapi masalah liputan dan penghantaran data yang perlahan apabila menggunakan kabel kuprum. Penduduk mengadu sukar mengikuti kelas dalam talian dan mesyuarat maya. Cadangkan cara untuk mengatasi masalah tersebut dan terangkan.
- An internet service provider company in a rural area is facing coverage issues and slow data transmission when using copper cables. Residents have complained that it is difficult to attend online classes and virtual meetings. Suggest a way to overcome this problem and explain.*

[2 markah/ marks]

5. Rajah 5 menunjukkan dua set eksperimen yang telah dijalankan untuk mengkaji sifat gas hidrogen klorida.

*Diagram 5 shows two sets of experiments that had been carried out to investigate the properties of hydrogen chloride gas.*

Eksperimen Experiment	Susunan radas Set up of apparatus
Set I	<p>Gas hidrogen klorida <i>Hydrogen chloride gas</i></p>  <p>Metilbenzena <i>Methylbenzene</i></p>
Set II	<p>Gas hidrogen klorida <i>Hydrogen chloride gas</i></p>  <p>Air <i>Water</i></p>

Rajah 5 / Diagram 5

- (a) Nyatakan jenis ikatan dalam gas hidrogen klorida.

*State the type of bond in hydrogen chloride gas.*

..... [1 markah/ mark]

- (b) Apakah yang akan diperhatikan apabila kertas litmus biru dimasukkan ke dalam tabung uji bagi Set I dan Set II? Terangkan jawapan anda.

*What is observed when blue litmus papers are put into the test tube for Set I and Set II? Explain your answer.*

[3 markah/ marks]

- (c) Hitung kepekatan larutan yang terhasil apabila  $480 \text{ cm}^3$  gas hidrogen klorida pada keadaan bilik dilarutkan ke dalam  $500 \text{ cm}^3$  air suling. Seterusnya, tentukan nilai pH larutan yang terhasil.

[Isipadu molar =  $24 \text{ dm}^3 \text{ mol}^{-1}$  pada keadaan bilik]

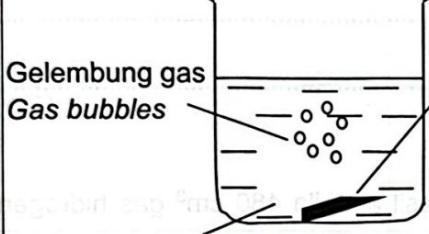

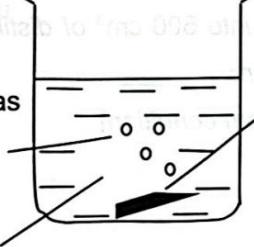

*Calculate the concentration of the solution form when  $480 \text{ cm}^3$  of hydrogen chloride gas at room condition is dissolved into  $500 \text{ cm}^3$  of distilled water. Hence, determine the pH value of the resulting solution.*

[Molar volume =  $24 \text{ dm}^3 \text{ mol}^{-1}$  at room condition]

[4 markah/ marks]

6. In Two experiments were carried out to investigate the effect of concentration of sulphuric acid on the rate of reaction. Table 6 shows the results of the experiments.

*Two experiments were carried out to investigate the effect of concentration of sulphuric acid on the rate of reaction. Table 6 shows the results of the experiments.*

Eksperimen Experiment		Masa yang diambil untuk magnesium mlarut sepenuhnya (s) <i>Time taken for magnesium to dissolve completely (s)</i>
I	 <p>1.2 g pita magnesium 1.2 g magnesium ribbon</p> <p>Asid sulfurik 1.0 mol dm<sup>-3</sup> berlebihan 1.0 mol dm<sup>-3</sup> excess sulphuric acid</p>	30
II	 <p>1.2 g pita magnesium 1.2 g magnesium ribbon</p> <p>Asid sulfurik 0.5 mol dm<sup>-3</sup> berlebihan 0.5 mol dm<sup>-3</sup> excess sulphuric acid</p>	60

Jadual 6 / Table 6

- (a) Nyatakan satu faktor yang boleh mempengaruhi kadar tindak balas.

*State one factor that can affect the rate of reaction.*

[1 markah/ mark]

- (b) Berdasarkan Rajah 6,

*Based on Diagram 6,*

- (i) namakan gas yang terbebas dalam eksperimen ini.

*name the gas released in this experiment.*

[1 markah/ mark]

- (ii) tulis persamaan kimia bagi tindak balas antara magnesium dengan asid sulfurik.

*write a chemical equation for the reaction between magnesium and sulphuric acid.*

[1 markah/ mark]

- (iii) hitung isipadu maksimum gas yang terbebas pada suhu bilik dalam eksperimen ini.

*calculate the maximum volume of the gas released at room temperature in this experiment.*

[Jisim atom relatif: Mg=24 ; Isipadu 1 mol gas pada suhu bilik = 24 dm<sup>3</sup>]

[Relative atomic mass: Mg=24; Volume of 1 mole of gas at room temperature = 24 dm<sup>3</sup>]

[2 markah/ marks]

- (c) Bandingkan kadar tindak balas antara eksperimen I dan eksperimen II. Terangkan jawapan anda berdasarkan teori perlanggaran.

*Compare the rate of reaction between experiment I and experiment II. Explain your answer based on collision theory.*

[From Experiment I]

.....

**Bahagian B / Section B**

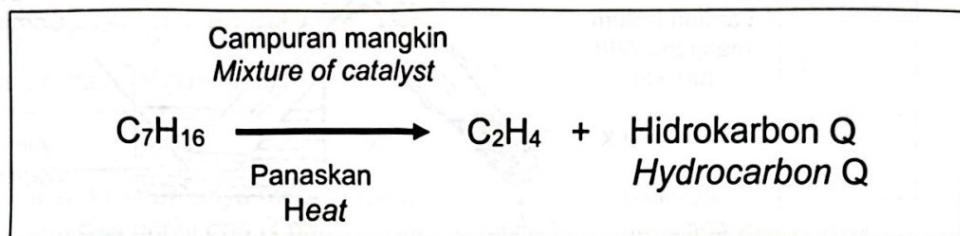

[20 markah / 20 marks]

Bahagian ini mengandungi dua soalan. Jawab satu soalan sahaja.

*This section consists of two questions. Answer only one question*

9. (a) Rajah 9.1 menunjukkan tindak balas yang digunakan dalam industri penghasilan hidrokarbon yang lebih kecil daripada hidrokarbon rantai panjang.

*Diagram 9.1 shows the reaction used in industrial production of smaller hydrocarbon from long chain hydrocarbon.*

Rajah 9.1/ Diagram 9.1

- (i) Namakan tindak balas di atas dan cadangkan satu mangkin yang boleh digunakan dalam tindak balas tersebut. Nyatakan formula molekul dan lukiskan formula struktur bagi hidrokarbon Q.

*Name the above reaction and suggest a catalyst that can be used in the reaction.*

*State the molecular formula and draw the structural formula of hydrocarbon Q.*

[4 markah/ marks]

- (ii) 5.6 kg sebatian  $\text{C}_2\text{H}_4$  terbakar dalam oksigen berlebihan untuk menghasilkan gas karbon dioksida dan air. Tuliskan persamaan kimia bagi tindak balas ini, seterusnya hitungkan isipadu gas karbon dioksida yang terhasil.

*5.6 kg compound  $\text{C}_2\text{H}_4$  burnt in excess oxygen to produce carbon dioxide gas and water. Write chemical equation for this reaction, hence calculate the volume of carbon dioxide gas produced.*

[Jisim atom relatif C=12;H= 1;

Isipadu molar gas pada keadaan bilik=  $24 \text{ dm}^3 \text{ mol}^{-1}$ ]

[Relative atomic mass: C=12;H=1;

*Molar volume of gas at room conditions =  $24 \text{ dm}^3 \text{ mol}^{-1}$*

[5 markah/ marks]

- (b) Rajah 9.2 menunjukkan susunan radas bagi proses penukaran sebatian X kepada sebatian Z.

Sebatian X mempunyai bilangan atom karbon per molekul kurang daripada tiga.

*Diagram 9.2 shows apparatus set-up of conversion process of compound X to compound Z.*

*Compound X has number of carbon atom per molecule less than three.*

Tindak balas <i>Reaction</i>	<b>Susunan radas Apparatus set-up</b>
I	<p>Sebatian X + Larutan kalium manganat(VII) berasid</p> <p>Compound X + Acidified potassium manganese(VII) solution</p> <p>Panas Heat</p> <p>Sebatian Y Compound Y</p> <p>Air Water</p>
II	<p>Asid sulfurik pekat Concentrated sulphuric acid</p> <p>Tuang Pour</p> <p>Sebatian X + Sebatian Y Compound X + Compound Y</p> <p>Panas Heat</p> <p>Sebatian Z Compound Z</p> <p>Air Water</p>

Rajah 9.2/ Diagram 9.2

Berdasarkan pada Rajah 9.2, kenal pasti tindak balas I, tindak balas II, sebatian X, sebatian Y dan sebatian Z. Nyatakan satu persamaan sifat antara sebatian X dan sebatian Z.

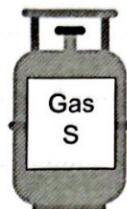

*Based on Diagram 9.2, identify reaction I, reaction II, compound X, compound Y and compound Z. State one similar property between compound X and compound Z.*

[6 markah/ marks]

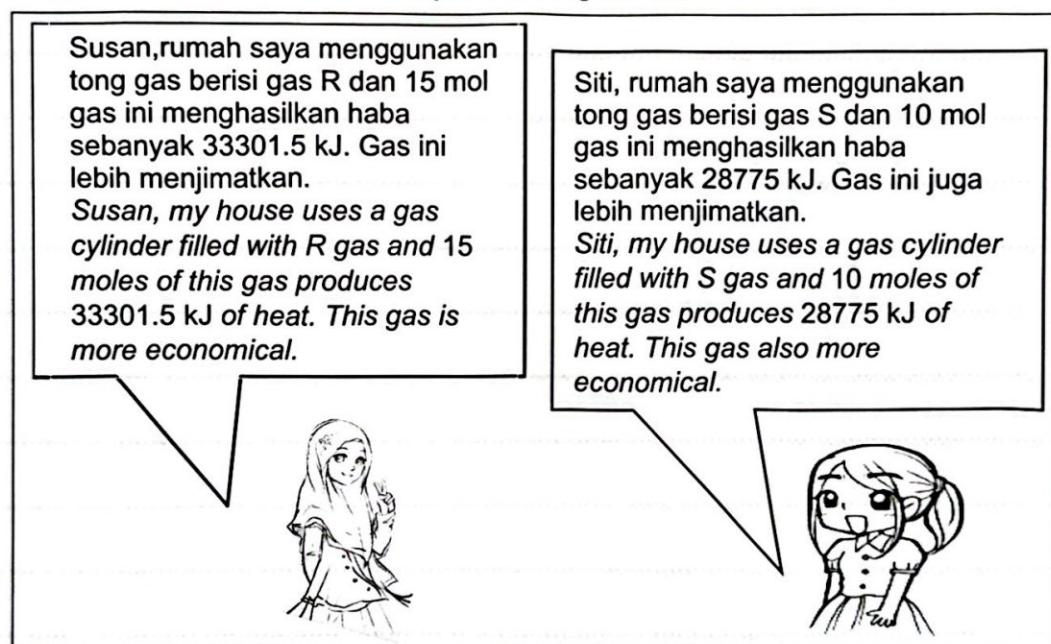

[Jawapan: 6]

- (c) Rajah 9.3 menunjukkan dua tong gas memasak yang berisi jenis gas yang berbeza dan Rajah 9.4 menunjukkan perbualan antara Susan dan Siti.

*Diagram 9.3 shows two cooking gas cylinders filled with 665 different type of gas and Diagram 9.4 shows conversation between Susan and Siti.*

Jenis gas <i>Type of gas</i>		
Jisim molar gas/ g mol <sup>-1</sup> <i>Molar mass of gas/ g mol<sup>-1</sup></i>	44	58

Rajah 9.3/ Diagram 9.3

Rajah 9.4/ Diagram 9.4

Berdasarkan Rajah 9.3 dan 9.4, gas memasak di rumah siapakah lebih menjimatkan?

Buktikan dengan menghitung nilai bahan api bagi gas-gas tersebut.

*Based on diagram 9.3 and 9.4, whose home cooking gas is more economical?*

*Prove it by calculating the fuel value of the gas.*

10. Rajah 10.1 menunjukkan susunan radas satu eksperimen untuk menentukan haba peneutralan antara asid dan alkali.

*Diagram 10.1 shows the apparatus set up of an experiment to determine the heat of neutralisation between acid and alkali.*

Rajah 10.1/ Diagram 10.1

Persamaan termokimia bagi tindak balas ini ialah:

*The thermochemical equation for this reaction is:*

- (a) (i) Apakah yang dimaksudkan dengan haba peneutralan? Nyatakan jenis tindak balas berdasarkan perubahan tenaga haba dan lukiskan gambar rajah aras tenaga bagi tindak balas ini.

*What is meant by heat of neutralisation? State type of reaction based on heat energy change and draw the energy level diagram for this reaction.*

[4 markah / marks]

- (ii) Jadual 10.1 menunjukkan haba peneutralan bagi tindak balas antara dua asid monoprotik HQ dan HR dengan larutan natrium hidroksida.

*Table 10.1 shows the heat of neutralisation of the reaction between two monoprotic acids HQ and HR with sodium hydroxide solution.*

Eksperimen <i>Experiment</i>	Bahan tindak balas <i>Reactants</i>	Haba peneutralan <i>Heat of neutralisation</i> (kJ mol <sup>-1</sup> )
I	HQ + NaOH	-57.0
II	HR + NaOH	-55.0

Jadual 10.1/ *Table 10.1*

Berdasarkan Jadual 10.1, cadangkan asid HR. Terangkan perbezaan haba peneutralan bagi Eksperimen I dan Eksperimen II. Jika Eksperimen I diulang menggunakan asid sulfurik dengan isipadu dan kepekatan yang sama, ramalkan haba peneutralan tindak balas ini.

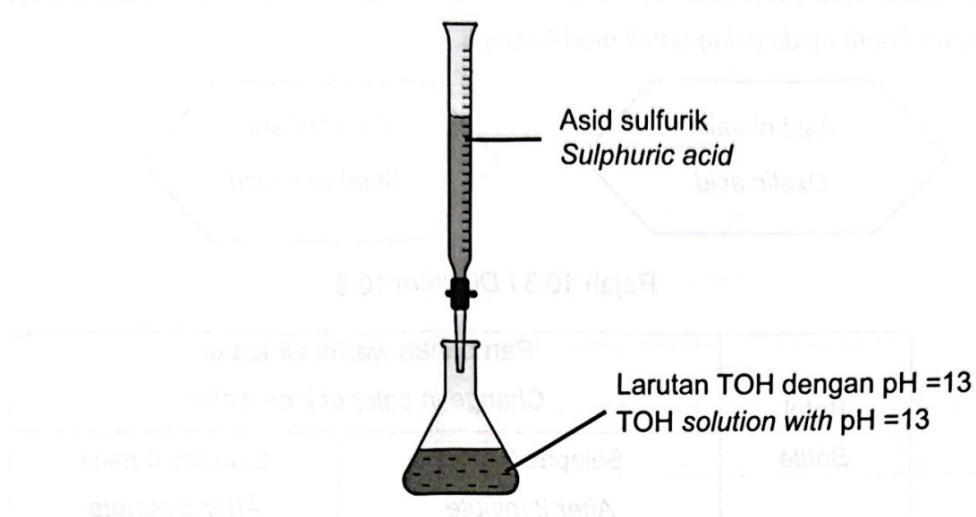

*Based on Table 10.1, suggest acid HR. Explain the difference in the heat of neutralisation for Experiment I and Experiment II. If Experiment I repeated by using sulphuric acid with same volume and concentration, predict the heat of neutralisation of this reaction.*

It is also important to have a plan in place so that you know what to do if an emergency occurs.

It is important to stay calm and think clearly when faced with a emergency situation.

It is also important to have a plan in place so that you know what to do if an emergency occurs.

**Bahagian C / Section C**

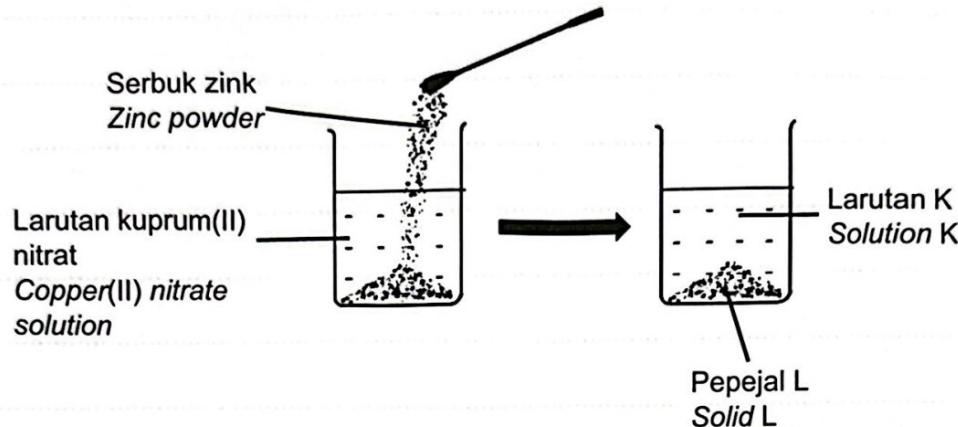

[20 markah / 20 marks]

Jawab soalan dalam bahagian ini.

Answer question in this section.

11. (a) Rajah 11.1 menunjukkan satu tindak balas penyesaran logam daripada larutan garamnya.

*Diagram 11.1 shows a metal displacement reaction from its salt solution.*

Rajah 11.1/ Diagram 11.1

Nyatakan maksud redoks. Berdasarkan Rajah 11.1, tuliskan formula kimia bagi larutan K yang terbentuk dan nyatakan warna pepejal L.

*State the meaning of redox. Based on Diagram 11.1, write the chemical formula for the solution K formed and state the colour of solid L.*

[3 markah / marks]

(b)

Salin dan lengkapkan persamaan di atas. Namakan tindak balas di atas. Tentukan sama ada tindak balas tersebut tindak balas redoks atau pun tidak. Terangkan jawapan anda.

*Copy and complete the above equation. Name the above reaction. Determine whether the reaction is a redox reaction or not. Explain your answer.*

[4 markah / marks]

(c)

Garam Salt	Penerangan Explanation	Pemerhatian Observation
Y	<p>Pepejal Y dipanaskan dan gas N yang terbebas diuji dengan kertas litmus biru lembap dan gas P diuji dengan kayu uji berbara.</p> <p><i>Solid Y is heated and the liberated gas N is tested with damp blue litmus paper and gas P is tested with a glowing wooden splinter.</i></p>	<ul style="list-style-type: none"> <li>Baki pepejal M berubah dari warna kuning kepada putih apabila disejukkan.</li> </ul> <p><i>The solid residue M changes from yellow to white when cooled.</i></p> <ul style="list-style-type: none"> <li>Kertas litmus biru lembap berubah menjadi merah.</li> </ul> <p><i>Damp blue litmus paper turns red.</i></p> <ul style="list-style-type: none"> <li>Kayu uji berbara menyala.</li> </ul> <p><i>Glowing wooden splinter ignites.</i></p>
Z	<p>Tindak balas antara larutan natrium sulfat <math>2.0 \text{ mol dm}^{-3}</math> dan larutan plumbum(II) nitrat <math>2.0 \text{ mol dm}^{-3}</math>.</p> <p><i>The reaction between <math>2.0 \text{ mol dm}^{-3}</math> sodium sulphate solution and <math>2.0 \text{ mol dm}^{-3}</math> lead(II) nitrate solution.</i></p>	<ul style="list-style-type: none"> <li>Mendakan putih terbentuk.</li> </ul> <p><i>A white precipitate is formed.</i></p>

Jadual 11 / Table 11

Berdasarkan Jadual 11, kenal pasti garam Y, garam Z , baki pepejal M dan gas P.

Nyatakan warna gas N yang menukarkan kertas litmus biru lembap kepada merah.

*Based on Table 11, identify salt Y, salt Z, solid residue M and gas P. State the colour of the gas N that turns damp blue litmus paper to red.*

[5 markah / marks]

- (d) Rajah 11.2 menunjukkan perbualan seorang guru kimia dengan beberapa orang pelajar di dalam makmal.

*Diagram 11.2 shows a conversation between a chemistry teacher and several students in the laboratory.*

Rajah 11.2 / Diagram 11.2

Berdasarkan situasi di atas, cadangkan satu bahan dari dapur yang sesuai untuk dicampurkan dengan air tercemar untuk menyingkirkan ion argentum.

Tulis persamaan ion bagi tindak balas tersebut.

Dengan menggunakan kaedah penyediaan garam Z di 11(c), huraikan langkah-langkah bagaimana anda menyingkirkan ion argentum dari air tercemar.

*Based on the situation above, suggest a suitable substance from kitchen to add with contaminated water to remove silver ions.*

*Write the ionic equation for the reaction.*

*By using the method of preparing salt Z in 11(c), describe the steps on how you would remove silver ions from contaminated water.*

[8 markah / marks]
